

# Improving Trust & Interoperability

Metadata for  
Data Refuge's  
Open Data Catalog

## THE NEED

The Data Refuge Data Catalog has a need to enrich metadata for their data objects and to create a more clearly defined relationship with the source records. The ultimate goal is to improve discovery and retrieval for these objects.

To meet Data Refuge's need, we worked to enrich metadata in a platform-agnostic format. Our goals were TRUST, INTEROPERABILITY, and serving USERS in both the web archiving and the scientific data communities. The result would facilitate more seamless data discovery.
